Thanks for the update Barry. Let me know ASAP if you can't get this figure generated; I might be able to have ESAT or someone else help me out.

Sincerely,

---

I'll talk to Chuck tomorrow and see if we can have this made a priority.

I just took me 3 weeks to get a site map made for a trip report for Rob Parker (the report was written for 3 weeks before the map was ready).

I will see if he can make it a priority for July 7th.

I have almost completed the data tables. I just need to check with Megan because some of the sample locations around Mogul and Bonita are impossible to order from the information available.

My first run at quickscore seems promising. Cadmium, copper, manganese, and zinc dominate in the central drainage area.

I think the composite of 5 backgrounds gave a defensible number.

I should have a good quickscore and explanation by COB Monday.

Subj site figure for powerpoint  
ect

Megan and Barry, Could you make an image from a topographic map (perhaps two slides due to the length of river) so that I could create a .ppt slide that shows the upper Cement Creek sources, wetlands (if we can get any better verification of their presence), and fishery that are within the TDL? We will need this for the HRS Doc Rcd anyway.

Figure 1 is a good start, but does not cover the whole TDL. Let me know if this is possible and what your turn around time could be? I would like to have it by July 7 if possible.

Sincerely,

Sabrina Forrest
